

Criterion provides full life-cycle services for our clients in the government, financial services, energy, telecommunications, industrial, and life sciences market sectors.

Criterion Systems has relationships with leading technology solutions companies in the world such as Microsoft, Fast, IBM, Siemens, Teradata, and others.

Criterion has a strong history of delivering some of the most innovative and cost effective security technology solutions in the marketplace today.

Criterion offers world class Cyber Security Services with an elite team of professionals who help clients identify, mitigate and manage the many complex cyber risks faced by Government agencies and Commercial clients. Through strategic and tactical approaches to Cyber Security, we enable clients to optimize protection of their IT investment, respond to incidents, proactively secure their IT environment, and manage IT assets from cyber threats.

CYBER SECURITY METHODOLOGIES

Criterion's methodologies are based on military information security and cyber operations. Our Cyber Security experts are highly regarded and maintain a reputation for delivering innovative solutions using proven, repeatable methodologies. We offer unique capabilities that integrate diverse and dynamic cyber operations into service-oriented packages that can be deployed anywhere in the world.

SERVICE OFFERINGS

- **Risk Management**
Incident Response
Privacy
Insider Threat Management
- **Cyber Assessment**
Return on Security Investment (ROSI) Analysis
Cyber Forensics
Vulnerability TESTING
- **Cyber Ops**
Network Architecture & Engineering
Security Infrastructure & Implementation
Defensive Cyber Ops
Cyber Monitoring
- **Cyber Advisory Services**
Strategy
Regulatory & Compliance
Awareness, Training & Education

Our team consists of professionals from across the Intelligence Community (IC) and Department of Defense (DoD), and are known as industry security leaders in Cyber Activities. We have a unique capability that integrates diverse and dynamic cyber operations into service-oriented packages that can be deployed to any area of the world. Criterion's experts provide support for a wide range of requirements and requests leveraging experience in multiple disciplines. Our Cyber Security experts maintain their reputation by constantly delivering innovative solutions to our clients despite changing requirements and environments.

CYBER TEAMS

Criterion Cyber Security is comprised of cyber operations professionals who focus in specific disciplines such as: cyber operations, system & network security, engineering and securing enterprise infrastructure, physical security, industrial security, certification and accreditation (DCID6/3/NIST), policy development.

- In-depth knowledge of information assurance and operations oriented security
- Accurate and consistent cyber intelligence methodologies
- Assess and investigate cyber breaches despite the ever changing cyber threat environment
- Expert in integrations, working with technologies you already have
- Experts in understanding and working with your organizations mission, security objectives and requirements, and budget concerns
- Track record of delivering high-speed Cyber Security Solutions
- Provide return on security investment documentation
- Lower risk in your environment without interfering with your operations and your mission objectives
- Highly cleared staff

Cyber Teams

IAMT

Information Assurance & Management Team: Implement a total information assurance program based on a centrally managed corporate model. Our teams provide practical experience in applying risk management, develop policy and procedures, implementing certification and accreditation, and developing and managing IA programs.

NOT

Network Operations Team: Develop and implement security engineering infrastructure technology solutions. We lead full life-cycle security engineering and operations management efforts, in addition to working with clients to deliver solutions based on current and future IT security investments.

VAT

Vulnerability Assessment Team: Deliver solutions based on proven, tested, and implemented methodologies to conduct network security assessments, focusing on protecting critical assets from potential threats with appropriate security measures. Our teams examine the entire enterprise infrastructure for a specific geographic area (site), to include all systems/networks/machines hosted within that site regardless of classification.

SRT

Special Response Team: A specialized team that has the training and experience to perform special operations outside the current operational capabilities of a client. These operations include cyber investigations, digital forensics, and incident response.

APT

Asset Protection Team: A premier provider of highly proactive and responsive network defense operations. We have proven expertise in collaborating with network owners to design, implement, and maintain large scale client Network Operations Centers (NOC) and/or Security Operations Centers (SOC) focusing on perimeter defense and operations.

Specter

Insider Threats Team: A highly trained team that specializes in stealthy and discrete Network Operations and/or Operations Centers (Op Center) activities focusing on insider threats. Specter manages professional activities that are based on aggressive proactive and reactive information collection, analysis, investigations and operations to identify and neutralize espionage, foreign intelligence, and/or terrorist activities.
